About the guide

This guide will assist you in installing the CD of the Atlas of Clinical Fungi. It provides a comprehensive explanation of the structure and function of the program and guidelines for efficient use and for your personal program settings.

Installation

Insert the CD-ROM into your CD-ROM-Drive. A dialog will open and lead you through the installation step by step. If the automatic CD-Detection under Windows is deactivated, you have to start the set-up manually. Open the Windows Explorer and double-click onto ‘Setup.exe’ on the CD-ROM.

For installation, you need a specific serial number, which you will find inside the CD-cover.

Using the compact installation option, the set-up program copies about 170 MB of data on your hard-disk drive. If you chose installation of plates and drawings and/or search data on the hard drive, for quick access to illustrations and/or for text search (the default and recommended option), the amount of additional space needed on your hard-disk drive is displayed during installation.

Content and structure of the CD

The CD edition of the Atlas of Clinical Fungi is based on the content of the book edition containing more than 1000 pages and 800 illustrations. A rapid search option for retrieving any kind of information is included. The supported functions are:

1. A well-structured navigation tree.
2. Various search options.
3. Browsing to previous or following pages.
4. Adaptation of the software to your personal needs (notes, bookmarks etc.).

The user interface corresponds to the common structure of Microsoft Windows programs. On the left side of the window, a table of contents is displayed in the form of a tree (‘Navigation tree’). Separate topics can be selected directly from the tree. The size of the tree can be changed by pulling the frame with the mouse. To close the left side of the window completely, click on the light blue arrow on the frame. The information pages will be opened by clicking the Titles in the Navigation tree on the right in the Working frame.

All functions of the CD are displayed in the Menus at the top of the window. For faster navigation you may use the buttons placed in the Toolbar beneath the menu table. To return to the Title page, click the CD-button on the very left of the Toolbar.

Search

Title search
You will find the Title search entry box just below the navigation tree at the left of the window. With the Title search component you will gain access to the items of the CD without clicking your way through the categories of the Navigation tree. Enter any search term in the ‘Title search’ field. Results will appear below that field. By clicking one of the results, you will be directed to that page in the Working frame.

**Search in page**

For Search in page, the following alternative methods are available:
1. Choose Navigate, point to Search in page from the Menu.
2. Select the Search in page icon from the Toolbar.
3. Use the key-combination: Ctrl + F.
4. **Right-click** to open the Context-menu, and choose the option Search in page.

The Search in page entry field is located in the upper part of the Working frame. Type any search terms into the field and click on ‘Search’.

**Search Atlas**

For full-text search of the Atlas, the following alternative methods are available:
1. Choose Navigate, point to Search Atlas from the Menu.
2. Select the Search Atlas icon from the Toolbar.
3. Use F12-key on the keyboard.

A separate search window will open. Here a full-text search works as follows:
1. Enter any text into the ‘Search pattern’ field and click the ‘Search’ button. The search results will appear on the right side of the window.
2. You can browse the search results pages by clicking on the ‘Previous’ or ‘Next’ links.
3. By clicking on one of the results, you will be directed to an information page.

**Character input**

You can use special letters, such as Ö, Ü etc. for full-text search. You can use capital as well as small characters, but no distinction between them is made. You can also use wildcard characters such as asterisk (*), question mark (?), or brackets ("(", ")"). The space (" ") character has multiple functions: it is used for itself, as an open space, or to start a new paragraph. The Symbol dialog box allows you to search for symbols – such as Greek characters.

**Wildcard search and combination of several search terms**

You use wildcard characters as place-holders for other characters when specifying a value you want to find. The asterisk mark (*) matches any number of characters (also open space). The question mark (?) character determines a match for a single character only. To search for patterns, you can use conditional operators, i.e., And, Or, and And_Not.

**Space between search terms and parts of search terms**

By using the * wildcard character or the conditional operator “And” in combination with the ‘Distance between subpatterns’ option, you can determine the maximum allowed distance between terms. For example, a search for ‘Candida’ And ‘glabrata’ with a maximal distance
of 40, will generate hits only for information pages that contain the search terms ‘Candida’ and ‘glabrata’ separated not more than 40 characters from each other on the same page.

**Error tolerance**
When searching similar terms, you may select ‘Error Tolerance’ at either ‘no’, ‘low’, ‘middle’ or ‘high’ levels. This option searches for the entered terms as well as for similar terms. By choosing a tolerance level (low, middle, high) the degree of deviation from the initial term can be defined. If you want to search ‘albidus’ with ‘high’ Error tolerance option, as results will appear ‘albida’, ‘albidus’ and ‘albidum’. The higher the error tolerance, the longer the process will take. When the search process is finished, you will find all variations of the term at the top of the screen. By unchecking some variations of the term, these will be cleared from the result list. Searching with error tolerance only display words that are spelled similarly, but not words on a similar topic or meaning.

**Image viewer**
The CD ‘Atlas of Clinical Fungi’ contains a large number of illustrations. The images can be enlarged almost without loss of quality. Inside the information pages, you will find only small images. Clicking on them will open an extra window with a larger picture on the top, and the explanations beneath. Some functions you may use while looking at a picture are:

- Fit image to window.
- Zoom in by centre: Choose the icon with the ‘+’ and click anywhere on the image. The point you clicked on, will be the centre, around which the image will be enlarged.
- Zoom out (icon with ‘-’).
- Zoom in by a rectangle: Choose the icon with the ‘+’ and the ‘rectangle’, draw a frame around the area you want to enlarge.
- Lens function.
- Hand-tool for moving the displayed area.
- Browse forward and backward to last visited pictures.
- List visited pictures (history).
- Return to the information page from which the image was taken.
- Copy the image to a separate window.
- Print image.

In addition to the basic functions explained above, the CD Atlas of Clinical Fungi offers several advanced functions to allow comfortable handling and usage.

**History**
Display a list of entries you visited previously, as follows:
1. Choose Navigate, point to History from the Menu, or
2. click the History-Button at the Toolbar, or
3. press Ctrl + H.

While navigating through the Atlas, a list of visited entries will be generated that remains stored after quitting the program. A double-click on an entry from this list leads you to the corresponding information page.
Bookmarks

Add Bookmark
To add a Bookmark, you have the following alternative options:

1. Choose Page on the Menu and point to Add Bookmark.
2. Right-click to open the Context-menu, and choose the option Add Bookmark.

Enter any keyword and click ‘OK’.

Manage Bookmark
To use a Bookmark, you have the following alternative options:

1. Choose Edit on the Menu, then point to Annotations.
2. Annotation-button in the Toolbar.
3. F9 key.

A double-click on an entry from the upcoming list leads you to the corresponding information page. You may order this list alphabetically, according to chapter, or notes by clicking on the corresponding grey column heading.

Notes

Insert Notes
For commenting a special text in the information page, use the right mouse button and select ‘Insert new note at this position’. Write your text and click ‘OK’. On the text position where you made a notice, will appear a yellow tick with a number. You can have a look at the content of the note by moving the mouse over the tick.

Manage Notes
To make a note, you have the following alternative options:

1. Choose Edit on the Menu, then point to Annotations.
2. Annotation-button in the Toolbar.
3. F9 key.

A double-click on an entry from the upcoming list leads you to the corresponding information page. You may order this list alphabetically, according to chapter, or notes by clicking on the corresponding grey column heading.

Text marks

To mark a text, you have the following alternative options:

1. Choose Page from the Menu, select Choose textmarker, point to textmarker (in the colour of your choice).
2. Right mouse button, select Choose textmarker, point to textmarker (in the colour of your choice).

Press the left mouse button and at the same time move the mouse over the text you want to mark. To stop text marking, follow the same steps, but select End marking. To mark a larger paragraph, use the mouse to select it and choose Page from the Menu, select ’Mark selected area’ in the colour of your choice.

The bookmarks, the notes and the text marks are stored and remain when the program is closed.
Options

Show hyperlinks
If you want the hyperlinks to look like normal text, point to Show hyperlinks from the Options menu. Subsequently the hyperlink formatting will disappear. To change hyperlinks again to blue and underlined, follow exactly as before.

Show tooltips
If you want the tooltips to be disabled, point to Show tooltips from the Options menu. Subsequently no tooltips will be shown. To enable the tooltips again, follow exactly as before.

Interpolate images
If you zoom in into an image you will see finally separate pixels. By enabling the Interpolate images options the image will be smoothened. However, you should be aware that this function is memory and processing power demanding. To en- or disable this function, point to Interpolate images from the Options menu.

Choose font
Select Options from the Menu, and then Choose font to change font options. Available options are font-type and –size. In addition you can choose smoothing the fonts. However, you should be aware that this function is processing power demanding.

Search options
Select Options from the Menu, point to Search options, and choose your preferred settings for full-text search (Search Atlas).

Right mouse button
You can reach many options by right clicking anywhere in the information page window. For example:
1. Open information page in a new window.
2. Open a link in a new window.
5. Print selected area.
6. Choose texmarker.
7. Mark selected area.
8. Insert new note.
9. Add bookmark.

Print

Only the topic actually displayed on your screen can be printed. Choose Atlas from the Menu, and the point to Print. For printing a special paragraph only, use the mouse to mark the text, right-click and choose Print selected area. For page settings, choose Atlas and then Printer settings.
Help

You may use the built-in help system concerning questions about this CD. Choose the Help Menu and then point to Help contents, or press F1.
